ZAC browser (gratuit)

Zac Browser is a completely free software. It is the first web browser developed specifically for children suffering from autism spectrum as autism, Asperger syndrome, the syndrome Rett disorder, childhood disintegrative disorder and pervasive developmental unspecified (DP), and PDD-NOS.

Zac Browser has been developed to provide an enjoyable, rewarding and secure. The children play, sing, play and discover the best of the Internet in just a few mouse clicks.

Zac Browser is a software that allows your child to access games (multiple games), activities (building on MANY interests) and videos (which provide a stimulating and encourage children to speak). All games, activities and videos are specially selected to have a positive effect on children with autism.

The Communication

msn		E-mails	
Skype		Phone	
Forum		Letters	

The financing of an European educational Comenius project.

It depends on the country, on the school size...

In France at the very least a partner receives 7000 € to finance :

- Material spending.
- Travelling expenses for teachers and pupils.
- Accommodation

Future...

The next meeting is still not scheduled, but will certainly happen in 2012.

It would be nice if new members join us. Our group is becoming outdated, few persons are losing their hair !!! Others are retired...

Coordinator of the workshop 3 :
